

Dashboard Design

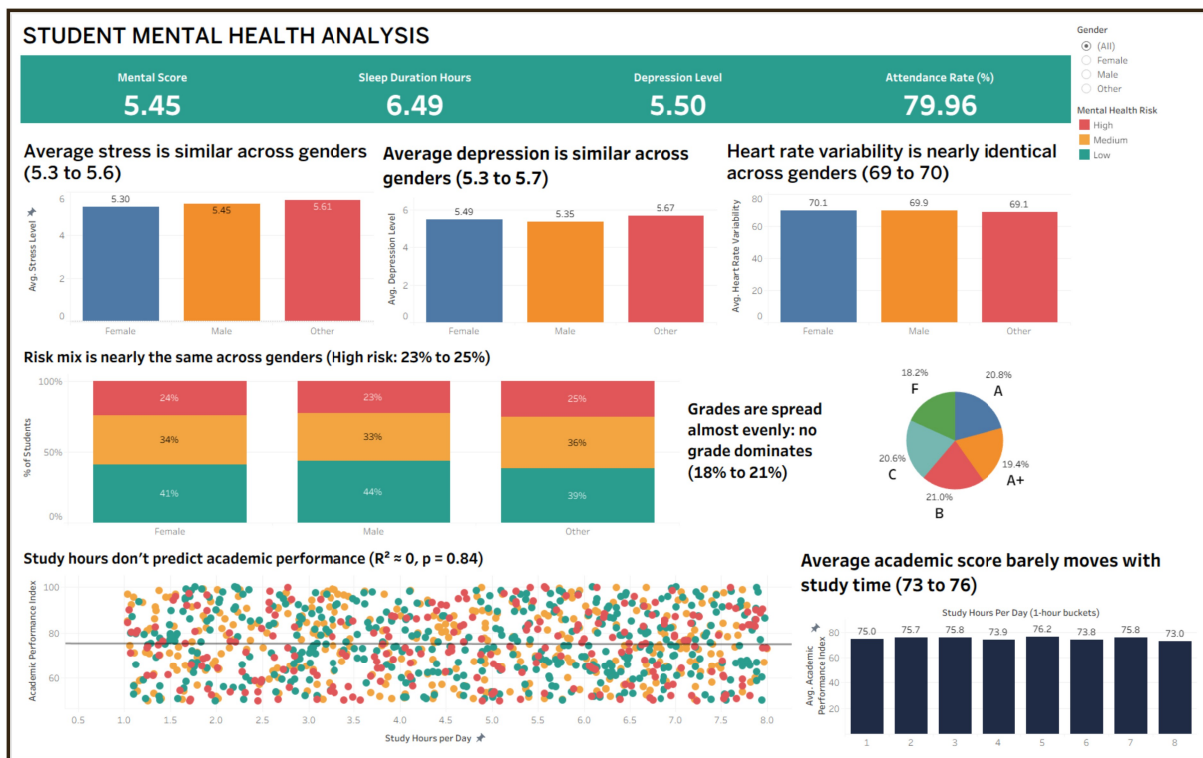

Date	4 October 2026
Team ID	N/A
Project Name	Student Mental Health Analysis (Tableau Dashboards & Story)
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Design
- Custom Visuals and Icons
- Use of Infographics

Major outcomes of the dashboard:

- **Overall Wellbeing Snapshot:** The KPI tiles show an average mental score of 5.45, sleep duration of 6.49 hours, depression level of 5.50 and attendance rate of 79.96%, giving a quick view of the student group as a whole.
- **Stress and Depression by Gender:** Average stress is 5.30 for Female, 5.45 for Male and 5.61 for Other students, and average depression is 5.49, 5.35 and 5.67. The gaps are very small, so gender does not explain either.
- **Heart Rate Variability:** Average heart rate variability is almost the same for every gender (Female 70.1, Male 69.9, Other 69.1).
- **Risk Mix by Gender:** High risk is 23% to 25% in every gender group, and Low risk is 39% to 44%, so mental health risk is spread evenly rather than concentrated in one group.
- **Grade Distribution:** Grades are spread almost evenly (18.2% to 21.0% of students in each grade), so no single grade dominates.
- **Study Hours and Academic Performance:** The scatter plot trend line is flat ($R^2 \approx 0$, $p = 0.84$) and the average academic score stays between 73 and 76 in every 1-hour study bucket, so more study hours do not predict a higher score.
- **Interactive Filtering:** The Gender filter and the Mental Health Risk colour legend update every chart at once, so the same story can be checked for each group.

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:
