

Story

Date	4 October 2026
Team ID	N/A
Project Name	Student Mental Health Analysis (Tableau Dashboards & Story)
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Story Structure:** The story has 10 story points: the dashboard summary, stress, depression and heart rate variability by gender, the KPI view, study hours vs academic score, study-hour buckets, the risk mix, the grade split and a closing "What it all means.." slide. Each point carries a short caption that explains the chart.
- **Gender Gaps Are Small:** Average stress is 5.30 for Female, 5.45 for Male and 5.61 for Other students. Average depression is 5.49, 5.35 and 5.67, and heart rate variability is 70.1, 69.9 and 69.1, so gender does not explain any of them.
- **Risk Is Spread Evenly:** High risk is 23% to 25% in every gender group, about 24% of all students.
- **Grades Show No Dominant Group:** Every grade holds 18% to 21% of students, so no single grade dominates.

- **Study Time Does Not Predict Results:** The study hours vs academic score trend line is flat ($R^2 \approx 0$, $p = 0.84$) and the average academic score stays between 73 and 76 in every 1-hour study bucket.
- **Closing Takeaway:** No single factor predicts student risk, and the data looks simulated. Broad, inclusive mental health support is a better fit than targeting one group.
